

Crome

winter oilseed rape

Crome has a Specific Recommendation (Sp) by AHDB for the UK in in 2020/21 for growing on land infected with common strains of clubroot. It has a high gross output, is early maturing with a very high oil content and yield, and good agronomic characteristics.

- ✓ Crome has high seed yield combined with high oil content to give high gross output.
- ✓ Crome has good resistance to Light leaf spot.
- ✓ Crome has good stem stiffness and resistance to lodging.
